Project Design Phase-I
Solution Architecture

Date	26 October 2023
Team ID	PNT2023TMID590970
Project Name	Project – Money Matters
Maximum Marks	4 Marks

Solution Architecture:

- Mobile/Desktop App: This is the user-facing part of the application, providing the interface for users to interact with the app on various devices.

- Frontend Application: The frontend handles user interface logic, design, and user experience. It communicates with the backend server and integrates third-party APIs for financial data.

- Backend Server: The backend server manages user authentication, stores data, processes business logic, and exposes API endpoints for the frontend to communicate with.

- Databases: Various databases store user data, transaction history, investment data, content management, and analytics data. These databases are essential for data storage and retrieval.

- Third-party Financial APIs: Integration with third-party APIs is crucial for obtaining real-time financial data.
